

Pollmeier Product Innovations 01

Important informations for Pollmeier-Customers

Now available: The new Width Pre-Sorting

Width range I: 100–124mm

Width range II: 125–149mm

Width range III: 150–174mm

Width range IV: 175–199mm

Width range V: 200–224mm

Width range VI: wider than 225mm

The Problem:

Conventional sawn timber is delivered in random widths. The distribution of widths is therefore coincidental. This means for you:

- **High efforts** – Each board needs to be measured and assorted according to cutting dimensions.
- **Loss of yield** – Unusable residual widths are often left over, especially when you have only a few combination widths available.

Our Solution:

We pre-sort into six different width ranges – board by board. You choose the optimal width spectrum – matched to your production requirements.

Optimise your cutting-to-size:

Reduce loss of yield and production time with width-pre-sorted Pollmeier beech. Even in your production significant cost savings are possible.

Quality	Superior
Lengths	2,45m and 3,05 m Other lengths on request
Thicknesses	26 (23,8)mm 32 (29,5)mm 38 (36,0)mm 52 (48,5)mm
Width range I	100 – 124mm
Width range II	125 – 149mm
Width range III	150 – 174mm
Width range IV	175 – 199mm
Width range V	200 – 224mm
Width range VI	> 225mm

From stock when available.
