Sawn beech timber from Pollmeier

Beech is the most common deciduous tree in Central Europe. In Germany alone, the beech stock currently amounts to 548 million* cubic metres. Due to strict laws, forests in Germany have been sustainably managed for more than 300 years, and growth is well above the harvested amount. As a result, the beech stock in Germany increased by 66 million* cubic metres between 2002 and 2012. European Beech is thus the hardwood species with the largest harvesting potential in the world – produced in sustainable and near-natural forests and conforming to the EU Timber Regulation and the Lacey Act. This ensures stable prices and long-term availability.

The light-coloured wood can be machined easily. Its tight, fine grain gives it an excellent finish and wood stain is absorbed quickly. Beech therefore is the ideal hardwood for many timber products such as furniture, doors, stairs, kitchen cabinets, skirting boards, flooring, interior joinery and toys. One wood – 1000 possibilities.

Since the opening of its first sawmill in 1995, Pollmeier has been specialising exclusively in European Beech. As a result, the company was able to perfect its beech products and processing methods over more than twenty years, through intensive research and practical experience. Pollmeier has developed its own, highly efficient sawmill technology, optimised the drying process and has continuously improved its beech timber products. Today Pollmeier is the world's market leader in this field.

* Source: German Federal Forest Inventory 2012

In the largest and most modern hardwood sawmills in Europe, Pollmeier processes more than 750,000 cubic metres of beech logs per year. All timber is treated naturally, using only water, air and heat.

Sawn beech timber from Pollmeier is renowned for its consistent high quality, uniform colour, ideal moisture content, dimensional stability and the pre-sanding that brings all characteristics of the wood to the fore. We assist you in changing your production from other hardwood species to European Beech. Our technicians would be delighted to advise you on site – wherever you are in the world. They will take all aspects of your production into account – end products, workflows and processes as well as labour costs. Together, we will find the most suitable timber grade for your products and for your production at the lowest possible price per unit.

Pollmeier Beech stands for an extraordinary wood species and for timber of high quality at affordable prices. Give it a try yourself!

Pollmeier Beech Width Options

Random widths

The large diameter of beech trees and our cutting methods ensure a high average width and good width distribution. Random widths are available from stock.

Fixed widths

We cut fixed widths very efficiently in an automated rip-saw with latest scanning technology. Fixed widths reduce transport and production costs, as the volume of timber to be processed is reduced and there is less waste. Optimise your transport, waste and production costs!

Width groups

As a special service for our customers, we sort the timber in 6 width groups on request. Select the ideal width group for your product dimensions.
